

Aerman Huofuer

📍 Shanghai    📧 [miever1@163.com](mailto:miever1@163.com)

Education

Nanjing University of Aeronautics and Astronautics

Computer Science and Technology

GPA: 3.1 of 5(81%)

Bachelor

2016-09-01 - 2020-06-22

Main courses: Advanced Mathematics、 Introduction to Computer Science、 Experiments of Programming Language、 Programming Language、 Computer Graphics、 Artificial Intelligence.

Experience

Shanghai UCloud Technology Co., Ltd

Vendor Manager

2023-06-01 - Now

- Vendor selection and management**  
Oversee and coordinate various vendors, such as Data Center, IP Transit, and Backbone Network, ensuring comprehensive management of their services.
- Contract negotiation and management**  
Negotiate contract terms with vendors and ensure that the terms align with the organization's requirements and legal obligations. Regularly evaluate and update contracts to ensure their effectiveness and protect the organization's interests.
- Service Level Agreement (SLA) oversight**  
Negotiate and monitor SLAs with vendors to ensure that the agreed-upon service levels are met. Resolve any issues related to SLAs and track vendor performance.
- Cost control and budget management**  
Collaborate with vendors and develop and execute budget plans to ensure cost control and resource optimization.

Shanghai UCloud Technology Co., Ltd

Front-end Engineer

2020-07-06 - 2023-06-01

- Product Development**  
Developed and maintained the front end of the company's cloud computing console, and more than 10 kinds of network products, including basic network (UNet), private network (VPC), load balancing (ULB), intelligent access box, etc.
- Requirements Review**  
Reviewed the feasibility of requirements from a technical perspective, completed API review, interactive review, etc., and issued feasible schemes.
- Project Supervision**  
Controlled the project progress and quality, dealt with online case, as well as solved key technical problems to ensure the smooth launch and promotion of products.
- Product Testing
  - Implemented front-end application based on business needs;
  - Followed up on the testing process;
  - Improved the development content according to the testing results.

Ericsson (China) Communication Co., Ltd. - Nanjing Branch

Front-end Engineer (Internship)

2019-10-01 - 2020-04-30

- Developed front-end business core modules for the IMA system, conducted system testing, and prepared software documentation.

Projects

Overseas Vendor Management Project

Vendor Manager

2023-06-01 - Now

Project Description

The project focuses on addressing the challenge of excessive dependence on a single vendor by promoting supplier diversification in critical areas such as data centers, IP transit, and backbone networks. Through active engagement with multiple vendors, the aim is to foster strong partnerships and achieve a more balanced allocation of resources, leading to improved operational efficiency and risk management.

Project responsibilities

- Overseeing resource procurement and vendor negotiations for Europe, MENA region, Hong Kong, establishing relationships with local or top-tier IDC resource suppliers.
- Managing existing resources and optimizing resource structure to establish a multi-vendor system within the company.
- Striving to secure cost savings by negotiating lower prices for existing resources.

Project Results

- Optimization of the existing resource system has been carried out, gradually reducing reliance on resellers and strengthening the company's brand value.
- Alongside optimizing the resource system, cost savings of 6 million RMB were achieved through contract negotiations.

Monitor Commercial Front-end Development

Front-end Engineer

2022-01-01 - 2023-06-01

Project Description

Unify monitoring solutions to provide one-stop and all-round monitoring acquisition, detection, alarm, display and notification capabilities to meet different demands of monitoring scenarios and ensure the timeliness, accuracy, and intelligence of monitoring.

Project Responsibilities

Be responsible for project topology components and service access, and front-end research and development of the dashboard.

Project Results

- Use AntV G6 to encapsulate the product side business topology and customize the topology style for the project;
- Investigate the large screen visualization scheme, embed grafana into the project, sinicize and modify some grafana source code to meet the product side demands;

Reconstruction and Optimization of Console Network Products

Front-end Engineer

2020-07-06 - 2022-01-01

Project Description

Some network products use Mobx for data flow management. There were few Mobx personnel and an archaic version of Mobx was being used, which made it more difficult to maintain the products.

Project Responsibilities

Keep good communication with the product manager, be familiar with the adjustment needs of the products, provide product optimization schemes, and continuously check the source code and other technical operations to get to know more about the product business logic, complete periodic optimization test, and reduce online risk as much as possible.

Project Results

- The code structure was clear and easy to understand and maintain;
- The code scalability was enhanced, and the development efficiency of the engine was further improved;
- It was friendlier to business support and could further accelerate the iteration speed of business after R&D improves efficiency.

Development and Maintenance of Network Business Components

Front-end Engineer

2020-07-06 - 2022-01-01

Project Description

Encapsulated the reusable logic in network product development for use by the team, and completed component design and adapted to a variety of scenarios.

Project Responsibilities

Be familiar with business logic, collect and sort out component application scenarios, discuss component design with product and interaction teams and other parties, and solve difficult problems.

Project Result

The creation of relevant business logic components greatly improved the team's business output efficiency and reduced the corresponding maintenance cost. The UI interaction platform was unified and thus improved product consistency.

Awards

Outstanding Student Leaders

2017-12-20

During the period of 2016-2020, I held positions such as class monitor and assistant to the counselor, and was repeatedly recognized as an outstanding student leader during this time.

Excellence Program

First Prize

2017-08-12

Won the first prize in the artificial intelligence group of the "Excellence Program" summer practice project in the academic year of 2017-2018;

Scholarship

Second Class Scholarship

2017-05-01

Won the second-class scholarship at the university level and the honorary titles of "Excellent Student Cadre" in the academic year of 2016-2017.
